Working With A Built-In Appliance Cabinet

All Cabinets.com European Frameless appliance cabinets are manufactured with a front panel that is intended to be modified on-site to fit specific appliances. This allows flexibility to fit a variety of appliance makes/models and gives the ability to get a custom fit. It is important to understand what appliance types work best and where additional on-site accommodations may be needed for specific appliances. Be sure to consult the appliance manufacturer's installation instructions for specifications on minimum and maximum cutout size requirements.

Tall Double Oven Cabinet (STAP)

This cabinet has a 65" high center panel and is intended for a wall-mount built-in appliance combination. Refer to the cutout chart to determine the maximum cutout sizes allowable. It is recommended that a Double Oven Cabinet with a drawer be used for a wall-mount oven combined with a wall-mount microwave, as the center panel is shorter and will result in less wasted space; consult with your Cabinets.com Designer for more information.

TALL DOUBLE OVEN STAP

Maximum Cut-Out Dimensions

One loose shelf and additional material for appliance support is supplied with this cabinet.
