

## Working With A Built-In Appliance Cabinet

All Cabinets.com appliance cabinets are manufactured with a small framed opening that is intended to be modified on-site to fit your specific appliances. This allows flexibility to fit a variety of appliance makes and models, and gives you the ability to get a custom fit. It is important to understand what appliance types work best and where you may have to make additional on-site accommodations to fit your desired appliances. Be sure to consult your appliance manufacturer's installation instructions for specifications on minimum and maximum cutout size requirements.

## Double Oven Cabinets (OVD)

This cabinet is intended for a double oven unit, or in some cases a combination microwave oven unit. Most double ovens will take a large portion of the opening, and leave around 2" above and below the unit. If it is used for a combination microwave oven unit, there may be around 6" of space above and below the appliance. Though the bottom drawer is quite small, the advantage of this cabinet is that you have one large vertical opening that can fit almost any double oven or combination microwave oven. **The vertical stiles on the face frame of this cabinet are wider** in order to accommodate the oven cutout, so the upper doors have more of a face frame reveal on either side. This cabinet can be custom-ordered to have less reveal; consult with your Cabinets.com Designer.
