Working With A Built-In Appliance Cabinet

All Cabinets.com appliance cabinets are manufactured with a small framed opening that is intended to be modified on-site to fit your specific appliances. This allows flexibility to fit a variety of appliance makes and models, and gives you the ability to get a custom fit. It is important to understand what appliance types work best and where you may have to make additional on-site accommodations to fit your desired appliances. Be sure to consult your appliance manufacturer's installation instructions for specifications on minimum and maximum cutout size requirements.

Single Oven Microwave Cabinet (SOM)

This cabinet is intended for a single oven and separate built-in microwave unit. The fixed shelf and rail create a divider between the two appliances. This cabinet can also be used for a combination microwave oven unit, if you choose to remove the center fixed rail and shelf to create one large opening between the top and bottom drawer. The advantage of this is that you get a larger drawer below and less wasted space. **The vertical stiles on the face frame of this cabinet are wider** in order to accommodate the oven cutout, so the upper doors have more of a face frame reveal on either side. This cabinet can be custom-ordered to have less reveal; consult with your Cabinets.com Designer.
